

# MAKE YOUR OWN SNOWFLAKE

A snowfall contains BILLIONS of snowflakes but did you know that no two snowflakes are ever the same?! Snowflakes are made of crystals of ice and different temperatures can lead to different types of snowflakes.

Make your own unique snowflake. Once you've got the hang of it, you can make your own snow storm!

1. Cut a piece of paper so that it is a square.
2. Fold your square in half to make a triangle.
3. Fold your triangle in half.
4. Fold paper into thirds with one side to the front and the other to the back.
5. Cut the two paper 'tails' off the end of your triangle.
6. Cut any shapes you like into the edges of the triangle.
7. Unfold your paper and - hey presto! A unique snowflake.
